NEXT GENERATION INFECTION CONTROL SOLUTIONS

VIRUSES BACTERIA ODORS

The Risk of Infection

The most serious germ lurking in locker rooms and gyms is MRSA

-CDC

Touching a contaminated surface, then touching your mouth, spreads 61% of diarrhea or vomiting outbreaks

-CDC

Most fitness facilities don't have the staff required to clean each piece of equipment after every use. Instead they rely on users to wipe down their machines."

-Athletic Business

Skin Infections in athletes are extremely common and account for more than half the **outbreaks of infectious diseases** that occur among participants in competitive sports.

- National Athletic Trainers' Association

People go to the gym to get healthy. But what if your gym is making them sick? Infectious bacteria and viruses can attack your clients health – and your bottom line.

- Commercial surfaces have **400x** more bacteria than a toilet seat*
*University of Arizona germ study, Dr. Charles Gerba
- Every surface customers touch becomes a breeding ground spreading Viruses and Bacteria like; Staph, E. Coli, Salmonella, Strep, Rhinoviruses, and Norovirus, Warts, and Fungus
- The old fashioned method of spraying with chemicals and wiping with rags is useless for killing pathogens where they live: in just a few hours **viruses can spread to 60%** of buildings users
- Studies show **28%** of gym surfaces tested positive for contamination

How Many Germs are on your Gym Surfaces?

The EarthSafe Team measures cleanliness on pre-cleaned surfaces using ATP Monitoring.

ATP Monitoring measures residual organic matter that may remain on a surface after it is cleaned. Surfaces are swabbed before & after cleaning/disinfection.

Results are immediate and specialized software reports and analyzes data.

Daily disinfection and odor control of equipment can now be done quickly, with **50% less labor**

TREADMILL

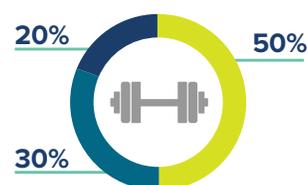

1,333,432 CFU

EXERCISE BIKE

1,333,418 CFU

FREE WEIGHTS

1,158,381 CFU

Bacteria levels per equipment type, in colony forming units (CFU) per sq. inch

- Gram-positive cocci
- Gram-negative rods
- Gram-positive rods
- Bacillus

Simple yet Powerful

The EvaClean system empowers workers to **sanitize and disinfect up to 80% more surface area** in the same amount of time it would take with traditional infection control tools.

evaclean™

NEXT GENERATION INFECTION CONTROL SOLUTIONS

A fully integrated, touchless sanitizing and disinfection solution combining the power and efficiency of the Protexus cordless electrostatic spraying technology with PURTABS and disinfectants and sanitizers.

Protexus Cordless Electrostatic Sprayers

Provide every worker with a powerful tool to attack microbes and decontaminate facilities.

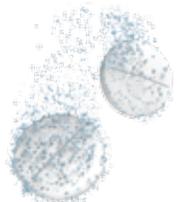

Protexus electrostatic spraying technology brings new, 360-degree, touchless disinfection and sanitizing capabilities to infection control experts, and reaches up to 3X more surfaces in the same amount of time it would take with today's buckets, rags and wipes.

PURTABS Disinfecting & Sanitizing Tablets

Safer for people. Deadly for infectious agents.

PURTABS effervescent disinfecting and sanitizing tablets deliver high performance without the harsh chemicals. PURTABS dissolve in water to produce a variety of strengths that meet the range of needs for every facility. From low-level sanitization required for food-contact surfaces, to powerful infection control.

Learn How EvaClean can benefit your facility, visit us at www.evaclean.com.

Today, you need a system based on innovative, practical technology. You need a solution that is cost-efficient, easy-to-use, and able to deliver superior performance. You need verifiable, predictable, and repeatable results. You need to make your space safer and healthier for patrons and employees.

You need EvaClean.
